(11492) Dastan Koktalov

(11541) Daniyar Mukhanov (may go by exchange)

**Name:** Order and Delivery management system

**Description:** We are making order and delivery management software for middle-sized cafe. Our software will include web site, where users will be able to watch and make online orders, and desktop application, which will allow staff of that company to manage orders, choose and send courier.

**Optional:** Also, if we will have enough time and energy, we will try to make android version of web site.

**Language/Platforms:** We will use PHP, MySQL, Java, JavaScript and JQuery, CSS, HTML5.

**Complexity:** Complexity of our software is in connection of desktop app and web site. We have to do it properly, to prevent data collision in our database. Also we will provide some types of "fraud order protection". In order to make buying more comfortable we will try to make proper "cart" system and good UI.

**Customer:**

Name: Dauren Yermakhanov

Address: Ryskulova - Navoi 2
